

Codeforces 4A - Watermelon

Problem Link

<https://codeforces.com/problemset/problem/4/A>

Description

Given the weight of a watermelon (w), determine whether it can be divided into two positive parts such that both parts have even weights.

Input

A single integer w ($1 \leq w \leq 100$).

Output

Print YES if the watermelon can be divided into two positive even parts; otherwise print NO.

Approach

The answer is YES only when w is greater than 2 and even.

Dart Solution

```
import 'dart:io';

void main() {
  int w = int.parse(stdin.readLineSync()!);

  if (w > 2 && w % 2 == 0) {
    print("YES");
  } else {
    print("NO");
  }
}
```

Time Complexity: $O(1)$

Space Complexity: $O(1)$
